

Linear regression: inference validity and efficiency (95.0% confidence)

..... Nominal --- Classic × Naive ML ● PPI ● PPI++

Grey band: 95% binomial Monte-Carlo reference range under exact calibration. Naive ML is omitted from relative-width panels because invalid coverage is not efficiency.

Fast diagnostic: seed 0 only; R=200 replicates. Main panels use adaptive focused y-axes within [0.75, 1.25]: limits are computed as valid min-0.1 and valid max+0.1; boundary triangles mark values outside the displayed range.
